

# North Allen Duo Technical Rider

## (As of February 2025)

1. North Allen Duo (the performers) require uninterrupted access to a grounded single or double electrical outlet. The performers will provide inputs, surge protectors and extension cables as needed.
2. At no time should the performers or their equipment be exposed to water (or moisture of any kind). This includes rain, ice, sleet, snow, hail, or freezing rain.
3. The performance area should have overhead cover of some sort (e.g. performing indoors, underneath a canopy, popup tent or other water resistant structure).
4. Did we mention that the performers and their equipment should never get wet?
5. That's all. We try to keep things very simple.
6. If the venue or event host plans to provide live sound equipment, please contact the performers (via phone or email) **at least three business days** prior to the performance date.
